# Wall fastening

 Your shelf must be fixed to a wall to prevent serious injury or damage that may result from tipping.

## 1 Check what's behind the wall

Beware of structural elements within the wall such as wiring, pipes, or building components.

If your drilling point will affect something within the wall, move to the next mounting point.

## 2 Mark the appropriate drilling depth

**Tip:** Use an 8mm drill bit.

**Tip:** Using the length of the screw as your guide, wrap a piece of tape around the drill bit for reference.

**Tip:** Also check the thickness of the wall in which you will be drilling

## 3 Drill a hole in the wall

**Tip:** Use a Hoover to reduce the dust created.

## 4 Insert the supplied dowel into the wall

## 5 Align the bracket over the dowel and insert the supplied screw

# How to take care of Tylko Shelf

Here are a few simple guidelines to keep your Tylko looking as good as new, for as long as possible.

Do protect your Tylko Shelf from excessive heat and open flame.

Don't place it too close to heat sources such as radiators.

Use gentle furniture cleaners. In case of any glue residues, use isopropyl alcohol for removal.

Don't use strong chemicals.

Do use a soft, moist cloth to clean it.

Don't use a hard scourer or brush.

Do wipe up any spills quickly.

Don't let water stand on the shelf for too long.

Always disassemble and assemble your shelf if you wish to move it to another place.

Don't move your Tylko shelf during or after it's assembled. It should always be assembled at its destination.

# Drawer adjustment - assembly

Scan the QR code to see how it works:

<https://youtu.be/hWDpACJiRWY>

1

If a drawer is out of alignment, check if the drawer is correctly assembled.

2

Check that all drawer components are correctly assembled.

Place the mounted drawer on a level surface and apply firm pressure to the side panels at the joints with the front panel, and to the back panel at the joints with the side panels.

# Drawer adjustment - assembly

Page 2/2

3

In a correctly assembled, the yellow teeth from the drawer rail and from the drawer connector should be connected and aligned. Look at the bottom of the drawer to confirm that the components are correctly connected on both sides.

4

To fit the drawer correctly, place it into its section, align it on the rails and apply gentle downward pressure. Then slide the drawer out and press down again. Slide the drawer in and out to confirm that it closes smoothly.

# Drawer adjustment - leveling

1

If after mounting, a side of the drawer rubs against the bottom element, the drawer will need to be adjusted.

**Tip:** You can level the drawer without removing it from the shelf, or, if it is more convenient for you, remove the drawer.

2

To adjust the drawer, adjust the black strips located near the grey elements beneath the drawer.

**Tip:** By moving the black strip towards the middle of the drawer, you raise the drawer. By moving the strip towards the outside, you lower the drawer

3

A correctly-assembled drawer should not rub against other unit components and is perfectly aligned with other shelf components.

# Adjusting hinges

Scan the QR code to see how it works:

Door a bit crooked or jam while closing? Here's how to adjust its position.

Before you start, prepare:   PH2

# Feet - how to protect the floor

To protect your floor, you can stick felt protection on the feet. This method works best on tiled or wooden floors.

# Let's stay in touch!

Well done, not only did you design your own Tylko, you take great care of it — **to look great years later!**
